Q: Segmentation  
Fault - Aborted in a Trap  
Error My program is  
running perfectly fine,  
but suddenly on the last  
line of my code. When I  
run the program I get the  
following error:  
Segmentation Fault -  
Aborted in a Trap. The

Create bootable Mac, Windows, Linux, and other operating systems for dual or single-boot from a single USB. The Unebootin application is a great and simple way to create bootable DVD/CD or USB drives for Windows. The program's interface is quite easy to use, with some simple

---

steps and the click of a mouse. By installing the software all of the files from the “ISO” will be copied from your download folder to a CD or USB drive. In a nutshell, the most important thing about the Unebootin is its simplicity. By downloading a single file to a drive on your computer, and then using

---

the application to place it on a blank CD, DVD, or USB drive, you will have a bootable copy of Windows 10, Windows 8, or any other installed version of Windows. The Unebootin application is extremely easy to use. The only time you'll have to get specific about what you want to do is when downloading a file from your computer. For

---

example, if you are downloading a Windows 10 ISO image, choose the ISO option. If you are downloading a DVD image, select the DVD option. Now you will be able to double-click the image to open it, and then drag and drop the file to your drive, or CD. The software will do the rest for you. After completing the process,

---

you can proceed to burn the DVD or create a bootable USB drive. Some of the more common options you'll see as you use Unebootin are compatible with Windows, macOS, Linux, Android, and other platforms. Before you begin, it is important to make sure you choose the correct option for your goal. For instance, if

---

you are creating a bootable Windows ISO, then choose the Windows ISO option. If you are creating a bootable drive for Windows, then choose the Windows option. Before you create a bootable DVD or USB drive, the software will allow you to select your title, author, and any other information you want. When you are

---

done, you can click on the “Write” button to begin the boot process. When creating a bootable USB drive you’ll want to make sure it’s large enough for your desired operating system. This process works the same as with any other USB drive. Before you can proceed, though, you’ll need to format the USB drive.

UUbyte Mac OS X DMG Editor is a fast and efficient Mac OS X DMG to ISO converter, that allows you to easily convert your Mac OS X ISO or DMG to an ISO file. It doesn't require any special attention on your part, as the program is designed in such a way that all you need to do is

---

to click the Convert button to initiate the conversion process. After that, all you have to do is wait for the conversion process to finish and you will have the required ISO file. Key Features: Simple and straightforward user interface; Fast and efficient conversion speed; Can create ISO files from Mac OS X ISO or DMG; Can be used

---

both online and offline.  
How To Burn ISO files to a CD/DVD: Writing ISO to CD/DVD from Mac OS X Disk Utility. The disc can be either a blank or a scratched CD/DVD disc, as the burning process won't be able to determine the type of the disc. In order to burn the ISO file, you need to connect your CD/DVD recorder to your Mac

---

computer. There are many options to choose from, such as the High Speed option or the auto format. If you are using a CD-R/RW, click "Burn". If it is a DVD-R or -RW, click the "Erase" button to erase the content on the drive. Add the ISO file or the folder with the ISO image to your CD/DVD. If you want to burn multiple files into the disc at one

---

time, then hold down the Ctrl key (Windows) or Command key (Mac) while burning them. If the program detects a file with a different file format on your CD/DVD, it will ask if you want to convert it to the proper ISO format. Simply hit "Yes" and the desired ISO file will be converted. You can also "Open" a DVD, ISO file on your Mac.
